to use Senior Moment"***

SENIOR MOMENT®

BRAIN HEALTH SUPPLEMENT*

What is Senior Moment?

Senior Moment is a nutritional supplement to help support brain function. Senior Moment contains a Nutramax Laboratories, Inc. exclusive formulation of phosphatidylserine (PS) and an oil rich in the omega-3 fatty acid docosahexaenoic acid (DHA) in a liquid-filled soft gel capsule.

What are phosphatidylserine and DHA?

Phosphatidylserine (PS) is one of a class of fats termed phospholipids that are essential to healthy structure of brain cell membranes and therefore important in healthy brain function. Senior Moment contains the phospholipid PS in a form similar to the PS found in your brain. The PS in Senior Moment contains the omega-3 fatty acid DHA which is important for the PS to uniquely benefit cell membrane function. Your brain has a high level of DHA as a part of PS and other phospholipids. Senior Moment also is formulated with additional DHA that your body uses, especially your brain, but cannot make adequately from other omega-3 fatty acids. DHA itself helps protect cells from the breakdown of the brain's cellular structure.

Why doesn't my brain work the way it used to?

There are many reasons why your brain may not work the way it used to. These include aging, stress, deficiencies in your diet and hereditary factors. Senior Moment is formulated to supplement your brain with nutrients to help support brain function.

How is Senior Moment different from other brain performance supplements?

Senior Moment supplies specific nutrients that are helpful for brain function and performance. In experimental models, it has been shown that these compounds become incorporated into the cell membrane, thus contributing to brain cell activity. In addition, DHA has also been shown to inhibit the action of compounds in the body that play a role in nerve cell breakdown.

How is Senior Moment administered?

Two soft gels daily to help support brain health.
