

WHY WE RECOMMEND WELACTIN™

WELACTIN™

HIGH-POTENCY NATURAL SALMON OIL
SUPPLEMENT FORMULATED JUST FOR CATS

ACTIVATE YOUR CAT™

*Convenient,
palatable formulation
for cats to help
support overall
wellness.*

FREQUENTLY ASKED QUESTIONS
ABOUT WELACTIN

WELACTIN™

What is Welactin?

Welactin is a specially prepared salmon oil manufactured to maintain a high content of Omega-3 fatty acids in a tasty liquid for your cat.

What are Omega-3 fatty acids?

Specific fatty acids known as “Omega-3 fatty acids” are the “good health” fatty acids. The two predominant long chain Omega-3 fatty acids are docosahexaenoic acid (DHA) and eicosapentaenoic acid (EPA).

How can Welactin help my cat?

Omega-3 fatty acids help support many systems in the body, including kidney function, brain and overall nervous system health, the immune system, and skin health.

Why should I choose Welactin over other fish oil products?

Welactin contains a higher proportion of the Omega-3 fatty acid DHA than do other fish oil products. This is ideal as DHA plays a role in many organ systems including the early development of the brain. DHA has beneficial effects on brain function, learning, and vision. *Welactin* has far-reaching effects throughout the body and can help to ACTIVATE YOUR CAT™.

What changes should I expect to see in my cat with Welactin?

While many of *Welactin's* important functions are at work inside your cat's body, you may notice an improvement in your cat's activity level, attitude, appetite, alertness, and general appearance.

How do I give Welactin?

Welactin is a tasty liquid, easily administered with the accompanying pump over your pet's food. Please follow the administration instructions found on the label. In most cases, *Welactin* is administered long-term for optimum benefit.

Are any side effects seen in cats given Welactin™?

No side effects were observed and no harmful effects on bloodwork were noted when *Welactin* was administered to cats in a study.

Doesn't my cat get enough Omega-3 fatty acids from food?

Another type of fatty acids are Omega-6 fatty acids. While the "natural diet" of animals in the past contained more balanced levels of Omega-6 and Omega-3 fatty acids, some cat foods today have higher amounts of the Omega 6 fatty acids relative to the amounts of Omega-3 fatty acids. *Welactin*, by providing the Omega-3 fatty acids DHA and EPA, helps to re-establish the balance between these two kinds of fatty acids.

Why did my veterinarian recommend Welactin instead of fish oil capsules or other liquids?

First, *Welactin* has been shown to be well absorbed by the intestinal system. In a research study, *Welactin* was shown to increase levels of DHA in the blood three times over baseline in cats.

Second, *Welactin* has been evaluated for safety. As noted above, no side effects and no adverse effects on bloodwork values were seen in cats given *Welactin* in a study. While heavy metal contamination can be a potential problem with any fish oil products, *Welactin* is monitored for the presence of heavy metals.

Third, *Welactin* contains what is listed on the label in the amounts listed (it meets label claim). There is less oversight for supplements as compared to drugs, and a recent report showed some fish oil products contained less DHA and/or EPA than what was listed on the label.

Lastly, while any fish oil product has the potential to turn rancid (it will then have a foul odor), *Welactin* contains vitamin E to help maintain freshness and stability.

Where can I purchase Welactin?

Welactin is available only through your veterinarian. Your veterinarian can help you decide if *Welactin* is right for your cat and help you monitor your cat's response.

See package insert for more detailed information on *Welactin*.
